

JIRA has a feature to move an issue from one project to another project. Let us understand with the following steps, how a user can do it.

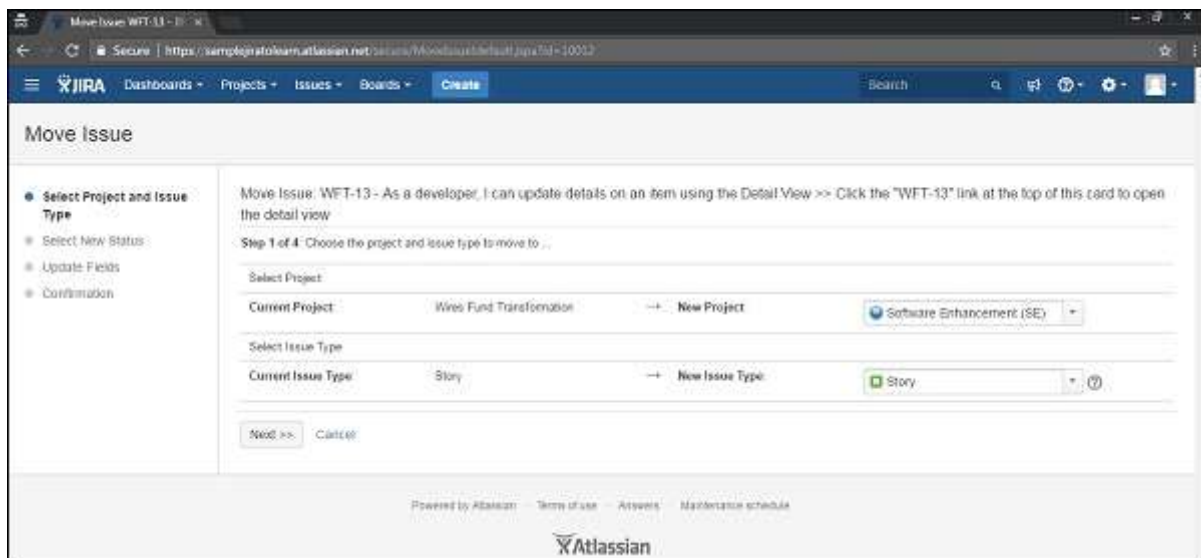

Steps to Follow

Go to the View Issue page that needs to move into another project. Select More → Move. The following screenshot shows how to access Move feature –

In the first step of the **Move Issue** wizard, select the new project where the issue will move, and if required/desired, change the issue type. Click on **Next** to continue.

The following screenshot shows Select Project and Issues step to move –

If there is a need to change the status of the issue, the user can go to Select Status page. Select the new status for the issue and click on the Next button to continue.

If required to specify the values for any required custom fields, the Update Fields page is displayed. Specify the desired values for each field, and click on Next to continue.

The following screenshot shows the Update Fields step, if required before moving an issue.

The screenshot shows the 'Move Issue' wizard in JIRA, specifically the 'Update Fields' step. The left sidebar shows the progress: 'Select Project and Issue' (Type: Software Enhancement, Issue Type: Story), 'Select New Status' (Status: To Do), and 'Update Fields' (selected). The main content area is titled 'Move Issue: Update Fields' and indicates 'Step 3 of 4. Update the fields of the issue to relate to the new project.' A note states 'Note: Step 2 is not required.' Below this, there is a field for 'Fix Version/s' with the value 'None'. At the bottom of the main area are 'Next >>' and 'Cancel' buttons. The footer shows 'Powered by Atlassian' and the Atlassian logo.

The confirmation page will display with all the changes. If a user wants to revise any of the changes, click the appropriate step in the left hand side menu to return to that page of the wizard. After that, click on the **Move** button to move the issue to the target project.

The following screenshot shows confirmation step to confirm details before moving –

The screenshot shows the 'Move Issue' wizard in JIRA, specifically the 'Confirm' step. The left sidebar shows the progress: 'Select Project and Issue' (Type: Software Enhancement, Issue Type: Story), 'Select New Status' (Status: To Do), 'Update Fields', and 'Confirmation' (selected). The main content area is titled 'Move Issue: Confirm' and indicates 'Step 4 of 4. Confirm the move with all of the details you have just configured.' Below this is a table comparing 'Original Value (before move)' and 'New Value (after move)'. The table has four rows: Project, Type, Status (Workflow), and Fix Version/s. The 'Move' button is highlighted with a red box.

	Original Value (before move)	New Value (after move)
Project	Wires Fund Transformation	Software Enhancement
Type	Story	Story
Status (Workflow)	To Do (Software Simplified Workflow for Project WFT)	To Do (Software Simplified Workflow for Project SE)
Fix Version/s	Version 2.0	

The Issue will be moved to the target project and displayed on screen. This Issue can be further edited to make additional changes. The following screenshot shows a new project and an issue type after the successful moving an issue.
